

Interaction between offshore wind farms and maritime navigation PIANC WG 161

Table of content

Chapter 1 – General aspects

1.1 Scope

1.2 Introduction

- 1.2.1 Terms of reference**
- 1.2.2 Structure of the report**
- 1.2.3 Related PIANC report(s)**
- 1.2.4 Members of the working group**
- 1.2.5 Meetings**
- 1.2.6 Acknowledgments**

Chapter 2 – Identification of interactions & difficulties

2.1 Identification of the different maritime activities

- 2.1.1 Mobiles at sea**
- 2.1.2 Activities at sea**

2.2 Interaction & difficulties

- 2.2.1 Navigation constraints, collision avoidance & marine navigational marking**
- 2.2.2 Electromagnetic radiations (EMR) interferences**
- 2.2.3 Emergency situations**
- 2.2.4 Interaction with industrial activities (dredging, offshore drilling, ...)**
- 2.2.5 Interaction with vital marine ecosystems & habitats (spawning areas, birds ...)**

Chapter 3 – Legal background

3.1 International references

- 3.1.1 UN (UNCLOS)**
- 3.1.2 UNESCO (MSP)**
- 3.1.3 IMO (SOLAS, COLREG, GPSR, ...)**
- 3.1.4 ITU (RR)**
- 3.1.5 ICAO (ICA convention annex 14)**

3.2 International recommendations

- 3.2.1 IMO**
- 3.2.2 IALA**
- 3.2.3 PIANC**

Chapter 4 – Navigation constraints, collision avoidance & marine navigational marking

4.1 Elements

- 4.1.1 Ships**
- 4.1.2 Marine traffic**
- 4.1.3 Geometric configuration of the water**
- 4.1.4 Aids to Navigation**
- 4.1.5 Maritime and atmospheric conditions**
- 4.1.6 Required pilotage, escorting & towing requirements**

4.2 Processes in Safety Distance Estimation

- 4.2.1 Concept design**
- 4.2.2 Detailed design**
- 4.2.3 Risk Assessment**

4.3 Marking and Aids to Navigation

Chapter 5 – Electromagnetic radiations (EMR) interferences

5.1 General introduction to electromagnetic radiation

- 5.1.1 What is electromagnetic radiation?**
- 5.1.2 What do wind farms have to do with electromagnetic radiation?**
- 5.1.3 What are electromagnetic radiation interferences?**
- 5.1.4 How can wind farm electromagnetic radiation issues managed?**

5.2 Radar

5.2.1 Radar operators

- a) Civil aviation radars and systems**
- b) National defence radars**
- c) Weather radars**
- d) Vessel traffic services (VTS) radars**

5.2.2 principles to avoid disruption of radar

- 5.2.2.1 Radar operator constraints**
- 5.2.2.2 Restricted areas**
- 5.2.2.3 Analysis of co-visibility of a wind turbine with radar**

a) Civil aviation radars

- 1) Primary radars*
- 2) Secondary radar*
- 3) VOR*

b) National Defense radars

- 1) High and medium altitude radar (HMA)*
- 2) Low level altitude radar*
- 3) Precision landing radar*

c) Weather radars

- 1) A project is authorized if all the following conditions are met:*
- 2) Sensitive sites cases:*

d) VTS radars

1) *Coastal VTS radars*

2) *Harbour VTS radars*

e) Analysis when co-visibility in an area of coordination

5.3 Radiocommunications

5.3.1 The Global Maritime Distress and Safety System (GMDSS)

5.3.2 GMDSS area

5.4 Automatic Identification System (AIS)

5.5 Direction finder (D/F)

5.6 GNSS & others navigation systems

5.6.1 GNSS

5.6.2 Radar

5.6.3 Local radio navigation systems

5.6.4 Magnetic compass

Chapter 6 – Emergency procedures

6.1 Risk assessment

6.1.1 Statistic approach

6.1.2 Major disaster approach

6.2 Risk identification

6.2.1 Search And Rescue (SAR)

6.2.2 Pollution

6.2.3 Salvage

6.2.4 Discovery of unexploded mine or bomb

6.3 Contingency plan

Chapter 7 – Marine Spatial Planning (MSP)

7.1 What is MSP?

7.2 Which part of MSP do we cover?

7.3 Navigation issues (safe distances).

Chapter 8 – Guidelines & recommendations to assess the required safety distances in vicinity of offshore wind farms

This last chapter “Recommendations” focuses on guidelines and recommendations regarding:

8.1 Legal issues

8.2 Safe distances for navigation

8.3 EMR

8.4 Emergency situations

8.5 MSP
