LIAISON NOTE

Final draft of Cyber Security guideline

1 INTRODUCTION

The ARM committee has been working on a cyber security guideline since ARM15, using valuable input from all other committees. All input was processed, and introductory chapters were added.

The ARM committee's intent is to send a final version out during ARM18, following a final review by the other committees.

The topic of Cyber Security is constantly changing. For that reason, ARM17 has updated the draft to a technology level that will be valid for at least several years, acknowledging that it may never be really complete.

The ARM committee plans to update the guideline to a revision 2 in the second half of the current work period, to keep it as relevant as possible.

2 ACTION REQUESTED

- 1 The VTS committee is requested to provide feedback on the final draft, if any, and forward the document to the DTEC committee, that is meeting in the week following VTS55.
- 2 The DTEC committee is requested to provide feedback on the final draft including any comments from VTS55, if any, and forward the document to the ENG committee.
- 3 The ENG committee is requested to provide feedback on the final draft including any comments from VTS55 and DTEC2, if any, and forward the document to the ARM committee, that is meeting in the week following ENG18.
- 4 The secretariat is requested to assist the committees in the swift forwarding of the document, as it will be a late input on DTEC2, ENG18 and ARM18 committee meetings. The document may be accompanied by this liaison note each time, so that only the attachment will be late input.
