

C74-10.4.3 (ENG14-12.2.1)

Proposal to revoke IALA Recommendation R0200 (E-200-0), Ed1.1, Overview of E-200 series

1 INTRODUCTION

Two input papers were received to ENG14 WG1 (ENG14-3.1.1.5 and ENG14-3.1.1.6) on the subject of IALA Recommendation R0200 (E-200-0) overview of E-200 series.

During the current and previous work programmes, WG1 has revised the Recommendation R0200 (E-200) series into high-level recommendations with instructional guidelines. With the release of IALA Guideline *G1148 Determination of Required Luminous Intensity for Marine Signal Lights* and the *Technical Documents Catalogue*, the methodology for the process of determining the required intensity is adequately covered. To that end, the Committee propose the withdrawal of IALA Recommendation R0200 (E-200-0), Ed1.1, on overview of E-200 series.

2 Action required

The Council is requested to withdraw IALA Recommendation R0200 (*E-200-0*), *Ed 1.1, Overview* from its publications.
